RAUPIANO PLUS is ideal for drainage of greasy waste water from commercial kitchens up to the grease separator. For lengthy grease waste lines, the use of pipe trace heating may be necessary. This prevents premature grease accumulation. The temperature of the pipe trace heating suitable for plastic pipes may not exceed 65°C.

BIM ist nach dem Stufenplan für Deutschland »eine kooperative Arbeitsmethodik, mit der auf der Grundlage digitaler Modelle eines Bauwerks die für seinen Lebenszyklus relevanten Informationen und Daten

konsistent erfasst, verwaltet und in einer transparenten Kommunikation zwischen den Beteiligten ausgetauscht oder für die weitere Bearbeitung übergeben werden«. Vor diesem Hintergrund hilft virtuelles Bauen, Zeitpläne und Kosten einzuhalten und Risiken zu minimieren. Planänderungen können zeit- und kosteneffizient über sämtliche Realisierungsebenen hinweg interpretations- und fehlerfrei realisiert werden. Schließlich profitiert das Facility Management durch die konsequente Weiternutzung der digitalen Gesamtdokumentation in der Betriebs- und Nutzungsphase. Dieses Fachbuch beschreibt den Status Quo dieser neuen Disziplin, die sich zunehmend z.B. bei öffentlichen Ausschreibungen – auch international – zu einer verbindlichen Konvention entwickelt. In diesem Kontext werden neueste Erkenntnisse und Trends für die Anwendung der Methode BIM in der Praxis in den Gewerken Trinkwasser, Energie und Brandschutz reflektiert sowie auch die rechtlichen Aspekte zukunftsweisend erläutert.

FAIRE FAIRE DES TRAVAUX DE RENOVATION DANS SA MAISON OU APPARTEMENT PAR UN PROFESSIONNEL DU BATIMENT. CHOIX DE PRODUITS et DE SOLUTIONS TECHNIQUES.

La revista decana de la prensa profesional de la construcción, líder del sector. Proporciona a los profesionales y empresas el conocimiento necesario para el desarrollo de sus proyectos y obras, tanto en su aspecto de edificación residencial, como en el industrial y comercial. Está dirigida a fabricantes y prescriptores; como arquitectos, aparejadores, instaladores, técnicos.

"Specifies requirements for polyethylene (PE) and polypropylene (PP) pipes and fittings for sewerage and drainage applications, above and below ground, inside and outside of buildings, and intended to be used where the pipeline is operating under gravity flow and the operating pressure is low. Includes requirements for both plain and structured wall pipes and fittings." - standards.govt.nz

The 2010 FTP Code provides the international requirements for laboratory testing, typeapproval and fire test procedures for products referenced under SOLAS chapter II-2. It comprehensively revises and updates the current Code, adopted by the MSC in 1996. The 2010 FTP Code includes the following: test for non-combustibility; test for smoke and toxicity; test for "A", "B" and "F" class divisions; test for fire door control systems; test for surface flammability (surface materials and primary deck coverings); test for vertically supported textiles and films; test for upholstered furniture; test for bedding components; test for fire-restricting materials for high-speed craft; and test for fire-resisting divisions of high-speed craft. It also includes annexes on Products which may be installed without testing and/or approval and on Fire protection materials and required approval test methods
