Specifically designed as an introduction to the exciting world of engineering, **ENGINEERING FUNDAMENTALS: AN INTRODUCTION TO ENGINEERING** encourages students to become engineers and prepares them with a solid foundation in the fundamental principles and physical laws. The book begins with a discovery of what engineers do as well as an inside look into the various areas of specialization. An explanation on good study habits and what it takes to succeed is included as well as an introduction to design and problem solving, communication, and ethics. Once this foundation is established, the book moves on to the basic physical concepts and laws that students will encounter regularly. The framework of this text teaches students that engineers apply physical and chemical laws and principles as well as mathematics to design, test, and supervise the production of millions of parts, products, and services that people use every day. By gaining problem solving skills and an understanding of fundamental principles, students are on their way to becoming analytical, detail-oriented, and creative engineers. An updated edition of the classic reference on the dynamics of road and off-road vehicles As we enter a new millennium, the vehicle industry faces greater challenges than ever before as it strives to meet the increasing demand for safer, environmentally friendlier, more energy efficient, and lower emissions products. Theory of Ground Vehicles, Third Edition gives aspiring and practicing engineers a fundamental understanding of the critical factors affecting the performance, handling, and ride essential to the development and design of ground vehicles that meet these requirements. As in previous editions, this book focuses on applying engineering principles to the analysis of vehicle behavior. A large number of practical examples and problems are included throughout to help readers bridge the gap between theory and practice. Covering a wide range of topics concerning the dynamics of road and off-road vehicles, this Third Edition is filled with up-to-date information, including: * The Magic Formula for characterizing pneumatic tire behavior from test data for vehicle handling simulations * Computer-aided methods for performance and design evaluation of off-road vehicles, based on the author's own research * Updated data on road vehicle transmissions and operating fuel economy * Fundamentals of road vehicle stability control * Optimization of the performance of four-wheel-drive off-road vehicles and experimental substantiation, based on the author's own investigations * A new theory on skid-steering of tracked vehicles, developed by the author.

Messages, Signs, and Meanings can be used directly in introductory courses in semiotics, communications, media, or culture studies. Additionally, it can be used as a complementary or supplementary text in courses dealing with cognate areas of investigation (psychology, mythology, education, literary studies, anthropology, linguistics). The text builds upon what readers already know intuitively about signs, and then leads them to think critically about the world in which they live - a world saturated with images of all kinds that a basic knowledge of semiotics can help filter and deconstruct. The text also provides opportunities for readers to do "hands-on" semiotics through the exercises and questions for discussion that accompany each chapter. Biographical sketches of the major figures in the field are also included, as is a convenient glossary of technical terms. The overall plan of the book is to illustrate how message-making and meaning-making can be studied from the specific vantage point of the discipline of semiotics. This third edition also includes updated discussions of information technology throughout, focusing especially on how meanings are now negotiated through such channels as websites, chat rooms, and instant messages.

This volume presents the general theory of generalized functions, including the Fourier, Laplace, Mellin, Hilbert, Cauchy-Bochner and Poisson integral transforms and operational calculus, with the traditional material augmented by the theory of Fourier series, abelian theorems, and boundary values of holomorphic functions for one and several variables. The author addresses several facets in depth, including convolution theory, convolution algebras and convolution equations in them, homogenous generalized functions, and multiplication of generalized functions. This book will meet the needs of researchers, engineers, and students of applied mathematics, control theory, and the engineering sciences.

Family-Centred Assessment and Intervention in Pediatric Rehabilitation analyzes the effectiveness of Family-Centred Services (FCS) for children with disabilities or chronic illnesses. This text provides you with the exact definition of FCS and offers proof that parent involvement in children's treatment greatly enhances therapy. You can use the suggestions and methods to integrate parents into therapy, maximizing the family's intervention experiences and making your work more successful and effective. Many clinicians agree that families play a crucial part in deciding what intervention strategies are best for their children. From this text, you will learn that listening to parents and valuing parental input will give you insight into the goals, needs, and ambitions families have for their children. This enables you to choose, with the parent, the interventions that best suit your patients' needs and the needs of their families. In addition to information on how to integrate parents and families into intervention, Family-Centred Assessment and Intervention in Pediatric Rehabilitation offers suggestions that will improve your existing FCS or help you implement a family-centred approach, including: performing therapy in natural settings, such as school or home, to make changes in the children's social and physical environments acknowledging the grieving and adaptation process of families while being compassionate and understanding letting parents describe what they would like their child to be able to do and accomplish in the future putting the parents' concerns and requests first, enabling parents to deal with caring for their child supporting parents and reinforcing them when they have innovative and helpful ideas informing parents on the progress of their children and educating parents on methodologies and strategies used in FCS Many of the suggestions derived from the analysis of current data and original research in Family-Centred Assessment and Intervention in Pediatric Rehabilitation have immediate clinical applicability, allowing you to quickly adapt methods into your intervention processes. This text also provides you with information on types of evaluative methods, such as Measure of Processes of Care (MPOC) and Family-Centred Program Rating Scale (Fam PRS), that will help you determine if your FCS program is working efficiently. Emphasizing the goal of parent interaction in FCS services, Family-Centred Assessment and Intervention in Pediatric Rehabilitation offers methods that will improve your work with families and patients, making services more beneficial and relevant to the child and to their families.
