Since the invention of automobiles, there were sporty cars and there were practical cars. BMW engineers dared to design a car with features of both. In doing so, they created one of the classic cars of all time, the 3-Series. For over 40 years, this model has given its owner the joy of everyday driving. The commute to work suddenly was as much fun as track day. Follow the story of this category-creating car from the origins of its maker as a World War I airplane engine manufacturer until the hugely successful car it is today. This is the first of three books about the history of the 3-Series. It tells the tale of a failing German car company unable to find its way after World War II. A last-minute loan gave BMW one last chance. The company used that opportunity to create the Neue Klasse generation of cars in which we find the genetic origins of the 3-Series. In the 1970s, the world was reacting to a severe oil-shortage. Introduced just at this right time was the practical but sporty first generation of 3-Series, the E21. With the introduction of the E30, the second generation of the 3-Series, BMW took the success of this two-door coupe and ran with it, creating sedans, wagons, all-wheel drive vehicles and the M3 supercar.

Why do we forget about people when we talk about innovation? Innovation has been a popular subject for the last years. Bruce Nussbaum, perhaps exaggerating, said “ Innovation died in 2008, killed off by overuse, misuse, narrowness, incrementalism and failure to evolve. It was done by CEOs, consultants, marketeers, advertisers and business journalists who degraded and devalued the idea by conflating it with change, technology, design, globalization, trendiness, and anything new. It was done by an obsession with measurement, metrics and maths and a demand for predictability in an unpredictable world. ” If so, why another book on innovation? Because it is not one more book on the subject! It is a book that does not talk about innovation, but about people. Is there anything as important as people when innovating? This book describes how to create a true culture of innovation, a culture where innovation is not an objective, but a consequence.

St. Johnston claims that his book fills a gap in the documentation of dance history and confesses he knows of only three books on the subject, those by Gaston Vuillier, Edward Scott, and John Weaver. The work contains much of the same information found in numerous other historiographies of the era. The author considers the birth of stage dancing to be Kate Vaughan's "Skirt Dance." Another opinion expressed by

St. Johnston is the erroneous notion that the quadrille was one of the dances that directly followed the minuet. As was common during this era, the author maintains a strict western bias with chapter titles such as "Quaint Dances in Civilized Countries."
