In order for an engine to start running, the carburetor must have a supply of fuel. In many cases with small engines, there will appear to be gas when in actuality none is getting to the engine. Try rocking the engine back and forth to listen for fuel sloshing. If you have a gas canister, try filling the tank up and giving it another shot.

Two stroke engines these days are only found in chainsaws, weed whackers, snowmobiles, outboard boat motors, and mopeds. These type of motors may make more power for a given size or weight, but they produce much more pollution. The Wankel Rotary engine, as most recently used by Mazda in the RX-7, works on a differerent system entirely.
