Field Manual for Small Animal Medicine offers anyone working in resource-limited environments a practical resource for delivering veterinary care outside the traditional hospital or clinic setting. Offers the only comprehensive resource for best practices when practicing veterinary medicine in resource-limited environments Integrates practical and cost-effective protocols where the ideal solution may not be available Presents information on vital topics such as operating a field spay/neuter clinic, emergency sheltering, sanitation and surgical asepsis, preventive care practices, zoonotic diseases, and euthanasia Serves as a quick reference guide for common surgical procedures, cytology interpretation, anesthesia and treatment protocols, and drug dosing

This book grows out of the optimistic view that mental retardation can be treated. It views mental retardation primarily as a behavioral problem. A child is diagnosed as retarded primarily because he behaves in certain maladaptive ways, not simply because he may have a chromosomal anomaly. The contributors view any intervention intended to produce adaptive changes in the behavior of the retarded as "treatment." The authors come from the fields of medicine, special education, and speech and hearing, as well as from psychology. The book is intended to help students and workers in the field apply research findings and theoretical formulations in their appraisal and treatment of mental retardation. The primary emphasis of the book is empirical. While many of the author's suggestions have not been subjected to rigorous experimental scrutiny, almost all have been derived from close examination of the research literature. A wide diversity of topics are included in this volume. Criteria employed were the relevance of the topic to the understanding and modification of defective behavior; and the subject's popularity or neglect in other sources. Ameliorating Mental Disability will be of interest to medical officers in institutions for the mentally challenged, lecturers giving courses for teachers of the educationally subnormal, and to psychologists, social workers, and teachers.

A rich array of methods and discussions of productive microbial processes. • Reviews of the newest techniques, approaches, and options in the use of microorganisms and other cell culture systems for the manufacture of pharmaceuticals, industrial enzymes and proteins, foods and beverages, fuels and fine chemicals, and other products. • Focuses on the latest advances and findings on the current state of the art and science and features a new section on the microbial production of biofuels and fine chemicals, as well as a stronger emphasis on mammalian cell culture methods. • Covers new methods that enhance the capacity of microbes used for a wide range of purposes, from winemaking to pharmaceuticals to bioremediation, at volumes from micro- to industrial scale.
