Under Article 102 TFEU, dominant firms are allowed to compete, but only to the extent their market behaviour does not constitute an abuse. Needless to say, the wording of the article neither explains what an abusive restriction of competition is nor how such a practice can be identified. Rather than developing a one-size-fits-all test applicable to all forms of market behaviour by dominant firms, the European Court of Justice (ECJ) and the General Court (ex; Court of First Instance) have set out a system of tests for separate categories of conduct. Drawing on the full range of the EU Courts ' relevant case law, this very useful book analyses the conditions that must be fulfilled for a broad range of business practices to be deemed abusive within the meaning of Article 102 TFEU, and also identifies the criteria that must be fulfilled for a practice to be ' objectively justified ' . The potentially abusive

practices studied here (as defined in the relevant case law) include the following: predatory pricing; margin squeezing; exclusivity agreements; loyalty rebates; refusals to supply to induce exclusivity; secondary line price discrimination; vexatious litigation; acquisitions of intellectual property rights (IPRs); refusals to supply necessary inputs; provision of storage equipment on the condition of exclusive use; selective above-cost price cuts; tying; technological integration; and refusal to license IPRs. The author also contrasts the Commission ' s decisional practice with the case law, assesses approaches under U.S. antitrust law to similar forms of conduct, and incorporates insights from economic theory. This study greatly enhances our understanding of the distinction between abusive conduct and lawful competition. In the course of its clarification of the EU Courts ' responses to individual forms of market behaviour, an overall approach to the identification of exclusionary abuses under Article 102 TFEU begins to come into view. Apart from the important new synthesis the work offers legal scholars, there can be little doubt this book will prove a valuable asset and even an inspiration to competition lawyers.

This collection of essays brings together discussions arguing that the circular economy must be linked to society and culture in order to create a viable concept for remodelling the economy. Covering a diverse range of topics and regions, including cities and living, food and human waste, packaging and law, fashion, design and art, this book provides a multi-layered examination of circularity. Transitioning to a circular economy, reducing resource input and waste, and narrowing material and energy loops are becoming an increasingly important targets to combat decades of unsustainable models of consumption. However, they will require a significant shift in social and cultural thinking and these dimensions have not yet been factored into policy

debates and frameworks. While recognising the key role of individual consumers and their behaviours, the book goes beyond this singular perspective to provide equal focus on institutional and political structures as necessary drivers for real change. *Social and Cultural Aspects of the Circular Economy* argues for a social and solidarity economy (SSE) to combine individual actions with a wider cultural shift. It will be an important read for scholars, researchers, students and policy-makers in the circular economy, waste studies, consumption and other environmentally focused social sciences.
