Currently, the United States has five deployed ballistic missile defense systems: the Ground-Based Midcourse Defense (GMD), Aegis BMD ships, Aegis Ashore, Terminal High Altitude Area Defense (THAAD), and Patriot systems.¹The current focus for U.S. homeland defense is the GMD system, whose deployment was initiated by the G.W. Bush administration to defend all U.S. states against ICBMs.

Although the technology to be used in a ballistic missile defense system is still extremely uncertain, it is useful to examine methods for calculating the cost-exchange ratio. As an example, the cost of an orbiting infrared laser ballistic missile defense system employed against intercontinental ballistic missiles launched simultaneously from a small area is compared to the cost of additional ...

The Princeton Three was a group of two physicists and a political economist working at the Princeton University during the Cold War Era. Of the three men Eugene Wigner and John Archibald Wheeler studied physics and Oskar Morgenstern studied political economy. Their main goal was to establish a national science laboratory in the United States of America that would help America catch the Soviet Union in the Intermediate range ballistic missile (IRBM) race, as well as push the United States ...

Strategic Defense Initiative examines developments in the technologies currently being researched under SDI. The OTA does not repeat the work of its earlier reports but gives special attention to filling in gaps in those reports and to describing technical progress made in the intervening period. The report also presents information on the prospects for functional survival against preemptive attack of alternative ballistic missile defense system architectures now being considered under the SDI. Finally, it analyzes the feasibility of developing reliable software to perform the battle management tasks required by such system architectures. Originally published in 1988. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

These essays from the journal *International Security* assess the technical feasibility and the strategic desirability of defense against ballistic missiles. Originally published in 1986. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. Introduction -- Designing a ballistic missile defense (BMD) system : architecture and trade-off studies -- Status and prospects of ballistic missile defense technologies, part I, sensors -- Status and prospects of ballistic missile defense technologies, part II, weapons, power, communication, and space transportation -- System development, deployment, and support -- System integration and battle management -- Computing technology -- Software -- Nondestructive countermeasures against ballistic missile defense -- Defense suppression and system survivability -- Defense suppression initiative -- Appendix A. Technology for producing dependable software -- Appendix B. Glossary.

The mortal danger of nuclear weapons is unique in its terrifying potential for devastation on an unprecedented and unimaginable scale. In this book, Sidney D. Drell and James E. Goodby—each with more than twenty years' experience in national security issues both in public and private capacities—review the main policy issues surrounding nonproliferation of nuclear weapons. They address the specific actions that the community of nations—with American leadership—should take to confront and turn back the nuclear danger that imperils humanity. The nuclear genie, say the authors, cannot be put back in the bottle. Our most urgent task as a nation today is to successfully manage, contain, and reduce the grave danger of nuclear weapons—whether in the hands of adversaries or friendly states. This book hopes to stimulate active public dialogue on this important subject.
