This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015,

and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the author presents a rare historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.

manufacturing firms have closed or moved to lower-cost locations. The process of deindustrialization is often seen as part of the inevitable shift towards a knowledge based economy and urban economies come to rely on research and development, financial services, tourism and the creative industries. This book looks at the changing link between manufacturing and knowledge-based activities in urban regions. The authors develop a new framework drawing on insights from organization studies and regional economic literature looking at various international case studies in Western and Eastern Europe, South America and Asia.

strive for. Among them, on the top of any list, these will be some of them. Get the most of the revenues and provide for the shareholders, it has in the recent years become more and more apparent, that the big companies seem to focus on shareholder value . This is often found in the US and is finding its way to the European continent. Another primary aim is to expand and become bigger or at least as big the main competitor. There is several reasons and valid objectives; one being the natural instinct of any CEO or General Manager; to achieve success and become an even bigger share of the global market. Other reasons may be the search for new markets, for whatever reason, the need for cutting the production costs, to be

closer to the customers or even to have access to new technologies or raw materials. In this case study, we will deal with the issue of BMW AG s decision in the mid 90 s to go abroad. To settle on the US market, starting up a manufacturing facility. There is a wide range of reasons, concerns and objectives to be dealt with prior to make that certain move, settling on foreign shores and setting up business. In order to understand what we are dealing with, we need to define multinational: Companies operating in multiple countries, but responding to local product-markets through more customized approaches In order to deal and operate in that environment, that company is expected to have highly qualified resources and access

to a wide range of information s; such as pricing, local laws and regulations, knowledge and understanding of the customer s need and preference s to name of few. The road that the company is about to embark upon, prior to going multinational, is full of risks in all sorts of different areas; such as political risks, financial risks, regulatory risks and risks dealing with competition. There must be a solid research team ready at hand, being able to provide the management team, with the necessary information s and background information. We will cast a light on the problems, benefits, motives and challenges regarding multinational business.

Inhaltsangabe:Abstract: The story of the automobile manufacturer production can not be told without the story of Henry Ford, who was one of the pioneers constructing his first horseless carriage in 1896. He incorporated the Ford Motor Company in 1903, proclaiming I will build a car for the great multitude . As predicted he did so in 1908 offering a Model T for \$ 950. This model heralds the beginning of the motor age. The car evolved from a former luxury item for the well-to-do to essential transportation for the ordinary man. Ford also revolutionized automobile manufacturing, in 1914 the Ford plant used innovation production techniques and was able to turn out a

complete chassis every 95 minutes. That was a revolution in the automobile manufacturing at the time, because the former production time took about 730 minutes to turn out a complete chassis! Ford achieved that fast production time by using a constantly moving assembly line, subdivision of labor, careful coordination of operations and he began to pay nearly double the wages offered by their competitors. His innovations made him an international celebrity in the industrial revolution and he was one of the first who thought about effective organization to achieve a higher productivity. Ford's methods that changed the automobile production were perhaps not mainly the introduction of the assembly line, his goal was also to

constantly standardizing the use of craftsmen. That firstly resulted in a high product variety despite in fact that they had been made using the same drawing. Secondly a lot of time was spent in fitting the parts together. These facts influenced major loss in productivity and under such circumstances a real mass-production was not possible. But by standardizing components and developing work routines was the first scope for an assembly line approach. The target of our case study is to present and analyze the changes in companies organizations, applied to the example of BMW. The opening part will summarize the history of the working and organizing techniques in general. The middle part will focus on the changes in production

organization in the automotive industry, followed by the last part analyzing new strategies in Sales & Marketing regarding the rebirth of MINI by the BMW Group.

One of the most tangible aftershocks of Punk was its

urgency to prompt individuals into action. Document your reality: do it yourself. From this, a generation of young men were inspired and, with often zero financial planning or business sense, in a bedroom, garage or shed, labels such as Factory, Rough Trade, Mute, 4AD, Beggars Banquet, Warp, Domino and Creation began, shifting the musical landscape and trading on an ethos and identity no brand consultant would now dare dream of. Musicians were encouraged to do whatever the hell they wanted and damn the consequences. From humble beginnings, some of our most influential artists were allowed to thrive: New Order, The Smiths, Depeche Mode, Orange Juice, Cocteau Twins, Sonic Youth, Happy Mondays, Primal Scream, Aphex Twin, Teenage
