Surface organometallic chemistry is a new field bringing together researchers from organometallic, inorganic, and surface chemistry and catalysis. Topics ranging from reaction mechanisms to catalyst preparation

# Download Ebook Chimica Suntini

are considered from a molecular basis, according to which the "active site" on a catalyst surface has a supra-molecular character. This, the first book on the subject, is the outcome of a NATO Workshop held in Le Rouret, France, in May, 1986. It is our hope that the following chapters and the concluding summary of recommendations

# Download Ebook Chimica Suntini

for research may help to provide a definition of surface organometallic chemistry. Besides catalysis, the central theme of the Workshop, four main topics are considered:

- 1) Reactions of organometallics with surfaces of metal oxides, metals, and zeolites;
- 2) Molecular models of surfaces, metal oxides, and metals;
- 3) Molecular approaches

# Download Ebook Chimica Suntini

to the mechanisms of surface reactions; 4) Synthesis and modification of zeolites and related microporous solids. Most surface organometallic chemistry has been carried out on amorphous high-surface-area metal oxides such as silica, alumina, magnesia, and titania. The first chapter, contributed by KNOZINGER, gives a short summary of the

# Download Ebook Chimica Suntini

structure and reactivity of metal oxide surfaces. Most of our understanding of these surfaces is based on acid base and redox chemistry; this chemistry has developed from X-ray and spectroscopic data, and much has been inferred from the structures and reactivities of adsorbed organic probe molecules. There are major opportunities

# Download Ebook Chimica Suntini

for extending this understanding by use of well-defined (single crystal) oxide surfaces and organometallic probe molecules.
