Bennie Rosato is fighting the battle of her life -- against her own twin. The action starts innocently enough, with a stolen wallet, but in no time events escalate and the twin wreaks havoc that can be created only by a dead ringer. Her twin tries to destroy Bennie's law firm, Rosato & Associates, and then strikes at her very heart -- which just happens to be otherwise engaged by a handsome, hunky stranger with the perfect amount of chest hair. But when a brutal murder occurs, Bennie realizes that the stakes have turned deadly. And the face of evil looks like her own.

The hearing organs of non-mammals, which show quite large and systematic differences to each other and to those of mammals, provide an invaluable basis for comparisons of structure and function. By taking advantage of the vast diversity of possible study organisms provided by the "library" that is biological diversity, it is possible to learn how complex functions are realized in the inner ear through the evolution of specific structural, cellular and molecular configurations. Insights from Comparative Hearing Research brings together some of the most exciting comparative research on hearing and shows how this work has profoundly impacted our understanding of hearing in all vertebrates.

Despite the progress that has been made in intensive care medicine, sepsis and septic shock are still accompanied by a high mortality rate. In recent years, new therapeutic approaches have been developed on the basis of a better understanding of this complex condition. This monograph contains contributions by well-known scientists and clinicians in the fields of hygienics, microbiology, infectious diseases, physiology, surgery and intensive care medicine. It provides an up-to-date overview of the etiology, pathophysiology, prevention, and therapy of sepsis and its complications.

This Special Issue of Marine Drugs gathers recent investigations on the proteomes, metabolomes, transcriptomes, and the associated microbiomes of marine jellyfish and polyps, including bioactivity studies of their compounds and more generally, on their biotechnological potential, witnessing the increasingly recognized importance of Cnidaria as a largely untapped Blue Growth resource for new drug discovery. These researches evoke the outstanding ecological importance of cnidarians in marine ecosystems worldwide, calling for a global monitoring and conservation of marine biodiversity, so that the biotechnological exploitation of marine living resources will be carried out to conserve and sustainably use the natural capital of the oceans.

The first edition of the Science of Photobiology edited by Kendrick C. Smith (Plenum Press, 1977) was a comprehensive textbook of photobiology, devoting a chapter to each of the subdisciplines of the field. At the end of many of these chapters there were brief descriptions of simple experiments that students could perform to demonstrate the principles discussed. In

the succeeding years some photobiologists felt that a more complete publication of experiments in photobiology would be a useful teaching tool. Thus, in the 1980s the American Society for Photobiology (ASP) attempted to produce a laboratory manual in photobiology. Cognizant of these efforts, Kendrick Smith elected to publish the second edition of *The Science of Photobiology* (1989) without experiments; anticipating the completion of the ASP laboratory manual. Unfortunately, the initial ASP efforts met with limited success, and several years were to pass before a photobiology laboratory manual became a reality. One of the major stumbling blocks to production of an accurate and reliable laboratory manual was the requirement that the experiments be tested, not just by the author who is familiar with the techniques, but by students who may be quite new to photobiology. How could this be accomplished with limited resources? Many ideas were considered and discarded, before a workable solution was found. The catalyst that enabled the careful screening of all experiments in this book was a NATO Advanced Study Institute (ASI) devoted entirely to this purpose.

ACCUSED is the first legal thriller in New York Times bestseller Lisa Scottoline's Rosato & DiNunzio series. Fiona Gardner was murdered six years ago in what appeared to be an open-and-shut case. The man condemned pleaded guilty. But Fiona's sister, Allegra, is convinced he is innocent. As Allegra turns to the lawyers at Rosato & Associates, newly promoted partner Mary DiNunzio knows Allegra's parents are against revisiting the case. And only the foolhardy would dare to go up against the one of the most powerful families in the country. But the women at Rosato & Associates can't resist an underdog. It will take a team of utterly unstoppable lawyers, plus the help of a thirteen-year-old genius, to discover if justice really was served all those years ago...
