$P(A \text{ or } B) = P(A) + P(B)$  Example: If event A is that a person is blood group O and event B is that they are blood group B, then these events are mutually exclusive since a person may only be either one or the other. Hence, the probability that a given person is either group O or B is  $P(A)+P(B)$ .

Detection, Estimation, and Modulation Theory

In the past half-century the theory of probability has grown from a minor isolated theme into a broad and intensive discipline interacting with many other branches of mathematics. At the same time it is playing a central role in the mathematization of various applied sciences such as statistics, operations research, biology, economics and psychology-to name a few to which the prefix ...
