A Textbook of Engineering Physics is written with two distinct objectives: to provide a single source of information for engineering undergraduates of different specializations and provide them a solid base in physics. Successive editions of the book incorporated topics as required by students pursuing their studies in various universities. In this new edition the contents are fine-tuned, modernized and updated at various stages.

students of Jawaharlal Nehru Technical University (J.N.T.U). Written in a lucid style, this book assimilates the best practices of conceptual pedagogy, dealing at length with various topics such as crystallography, principles of quantum mechanics, free electron theory of metals, dielectric and magnetic properties, semi conductors, superconductivity, lasers, holography, and nanotechnology.

The world is an interdependent whole of which everything is an integral, complexly related, part. Yet current ways of thinking, and being, persistently separate social phenomena and the individual self from the multiple dimensions with which they are

interconnected. The Integral Nature of Things examines this revealing paradox and its consequences in a variety of sites: everyday language, labour, advertising, technology, post-structuralist theory, political rhetoric, urban planning, sex, neoliberal globalisation. Mani demonstrates how even though the interrelations between things are obscured by the ruling paradigm, the facts of relationality and indivisibility continually assert themselves. The book interweaves prose with poetry and sociocultural analysis with observational accounts to offer an alternative framework for addressing aspects of the cognitive, cultural, political, and ethical crisis we face today.
