18. Do enzymes act better under acidic or alkaline pHs? Most enzymes act under pHs between 6 and 8, a range that corresponds to the general acidic level of cells and blood. There are enzymes, however, that act only under very acid or very alkaline pH. Therefore, enzyme activity depends on pH range.

### Enzyme Activity - Biology Questions

Biological Molecules and Enzymes (Answers) Answer outline and marking scheme for question: 1 Give yourself marks for mentioning any of the points below: a) (i) Amino acid. (ii) Possession of CH<sub>3</sub> group/different R group. (2 marks) b) (i) Glycogen consists of glucose/one type of monomer. Many different amino acids combine to form proteins.

### A-Level Biology Question and Answers 2020/2021

Enzymes are used for many biological reactions. Amylase is an enzyme found in saliva that starts to break down starch into glucose, while glucose oxidase is an enzyme that helps cells to break down sugar. Glycogen synthase helps to convert glucose to glycogen. Fatty acid synthetase allows fatty acids to be created in the cytoplasm from a molecule that results from the breakdown of ...
