Described by Jeff Prosise of PC Magazine as one of my favorite books on applied computer technology, this updated second edition brings you fully up-to-date on the latest developments in the data compression field. It thoroughly covers the various data compression techniques including compression of binary programs, data, sound, and graphics. Each technique is illustrated with a completely functional C program that demonstrates how data compression works and how it can be readily incorporated into your own compression programs. The accompanying disk contains the code files that demonstrate the various techniques of data compression found in the book.

Web services and Service-Oriented Computing (SOC) have become thriving areas of academic research, joint university/industry research projects, and novel IT products on the market. SOC is the computing paradigm that uses Web services as building blocks for the engineering of composite, distributed applications out of the reusable application logic encapsulated by Web services. Web services could be considered the best-known and most standardized technology in use today for distributed computing over the Internet. This book is the second installment of a two-book collection covering the state-of-the-art of both theoretical and practical aspects of Web services and SOC research and deployments. Advanced Web Services specifically focuses on advanced topics of Web services and SOC and covers topics including Web services transactions, security and trust, Web service management, real-world case studies, and novel perspectives and future directions. The editors present foundational topics in the first book of the collection, Web Services Foundations (Springer, 2013). Together, both books comprise approximately 1400 pages and are the result of an enormous community effort that involved more than 100 authors, comprising the world's leading experts in this field.

This collective work identifies the latest developments in thefield of the automatic processing and analysis of digital colorimages. For researchers and students, it represents a critical state of theart on the scientific issues raised by the various stepsconstituting the chain of color image processing. It covers a wide range of topics related to computational colorimaging, including color filtering and segmentation, color texturecharacterization, color invariant for object recognition, color andmotion analysis, as well as color image and video indexing andretrieval. Contents 1. Color Representation and Processing in Polar Color Spaces,Jesús Angulo, Sébastien Lefèvre and OlivierLezoray. 2. Adaptive Median Color Filtering, Frédérique Robert-Inacio and Eric Dinet. 3. Anisotropic Diffusion PDEs for Regularization of MultichannelImages: Formalisms and Applications, David Tschumperlé. 4. Linear Prediction in Spaces with Separate Achromatic andChromatic Information,Olivier Alata, Imtnan Qazi, Jean-ChristopheBurie and Christine Fernandez-Maloigne. 5. Region Segmentation, Alain Clément, Laurent Busin, OlivierLezoray and Ludovic Macaire. 6. Color Texture Attributes, Nicolas Vandenbroucke, Olivier Alata,Christèle Lecomte, Alice Porebski and Imtnan Qazi. 7. Photometric Color Invariants for Object Recognition, DamienMuselet. 8. Color Key Point Detectors and Local Color Descriptors, DamienMuselet and Xiaohu Song. 9. Motion Estimation in Color Image Sequences, Bertrand Augereauand Jenny Benois-Pineau.

Profiles of 750 major U.S. companies.

The ABA Journal serves the legal profession. Qualified recipients are lawyers and judges, law students, law librarians and associate members of the American Bar Association.

Boasting an impressive list of contributors, this first edition of Trademark Law and Theory brings together a compilation of well-written and powerfully argued works by leading international academics. The book is certainly one of the most extensive and thought provoking overviews of contemporary trademark law and theory yet to be published. . . Whilst all the contributions share in common their examination of the rapidity of change within trademark systems, the editors should be commended on their generous seasoning of other cross cutting themes throughout the Handbook. . . This fascinating compendium enriches our understanding of the shape, substance, and form of trademark law and theory. . . this Handbook is perhaps a rare exception to the adage that no book can be all things to all men . Its broad sweep approach and cross cutting themes enable a range of interested parties, such as policymakers; academics in the fields of marketing, business, consumer psychology; in addition to the usual suspects; to dip in and out of the Handbook as they wish. . . a unique and erudite collection of essays concerning trademark law and theory. . . Odette Hutchinson, Communications Law Trademarks is an area of vital, practical everyday concern, and the idea of producing a volume that brings together the perspectives of 19 thoughtful and experienced legal scholars is a bold and exciting initiative. The present volume does not disappoint and the two editors are to be congratulated on orchestrating an ensemble that simultaneously informs and stimulates. The title is apt: it is truly contemporary and is highly theoretical and doctrinal in character, while the interesting choice of the word handbook suggests clearly that this is a work in progress, a snapshot at a particular time of the challenging lines of individual research that each contributor to the volume is undertaking. It is a fine addition to a larger series of research handbooks in intellectual property published by Edward Elgar under the series editorship of Jeremy Phillips. . . The editors have done a fine job in presenting this material in such a clear and coherent fashion. . . this is an excellent and rewarding volume of readings that will be of interest to anyone working in the area of trademarks, whether as an academic or as a practitioner. Indeed, for the practitioner it will be of particular value, in that it contains, and opens up, many areas of inquiry that may not always be apparent when working at the coalface of a particular problem. . . For both kinds of readers, the real value of the volume is to have so many different kinds of perspectives brought together within the space of a single volume. . . this is a handsome production: the publishers and editors are to be commended on the clarity and cleanness of the typeface and headings, the thoroughness of the index, and the accuracy of their proof

reading. It has also been given a striking and evocative cover. Sam Ricketson, University of Melbourne Law School Australia, European Intellectual Property Review Trademark Law and Theory is a first-rate exploration of the issues that will dominate trademark law in the 21st century. Authors from five continents provide a truly global perspective on the present and future of trademark law. An exceptional collection of contributors and contributions. Robert Denicola, University of Nebraska, US This compendium is an excellent source of writing on all aspects of trademark law and practice by experts from Europe, the United States, South Africa, Singapore, New Zealand and Australia. It will be a stimulating read for lawyers, academics, students and policymakers alike on the present and developing trends in law and policy relating to trademarks as marketing tools and cultural artefacts. The editors deserve congratulation on their concept for the book and their judicious selection of material. David Vaver, University of Oxford, UK All students, young and older, in the burgeoni

Report addresses the far-reaching impact that digital technologies-- the Internet in particular-- have had on intellectual property (IP) and the international IP system.

Cybercases & the Internet add new dimensions to the law of trademarks, copyrights, trade secrets, & patents. In this timely resource, the authors analyze these areas of I.P. law & how each interacts with information in the unique situations of cyberspace. You get unmatched guidance on examining & handling cases that involve questions about protecting & enforcing I.P rights as they relate to the Internet, including: * administrative dispute resolution policies proposed & implemented by domain name registrars--& how to protect registrations from challenges * application of trademark law to Internet issues such as metatags, hyperlinking, framing, & spamming * infringement, defenses, & criminal penalties as applied to Internet technologies such as digital watermarks & World Wide Web text, graphics, & sound files * what Internet Service Providers (ISPs) need to understand about the Online Copyright Infringement Liability Limitation Act * how WWW sites, bulletin board postings, & Internet e-mail are posing fundamental challenges to various trade secret doctrines * recent enforcement actions of Internet technology & software patents * plus details on the domain name system, how to register domain names, & more. Use this resource to stay on the edge of Internet I.P. law; examine the cases that are setting precedents; & prepare, argue, & win your cases in this expanding area.
