The settings of the radionics machine, then, would compare to ducts in a heating system. On the typical radionics machine, then, one link connects with the trend while the other link connects with the target. Both links being in the same place (the device), a connection builds between trend and target.

Radionics makes use of something called a rate. The rate taken on a radionic box is a numeric representation for a concept, simply by turning a dial on a radionic wishing machine, and stroking a rubbing plate or stick pad. Usually this concept we are trying to capture in radionics is one of two kinds: Emphasis vs suppression.

Some radionics practitioners also transmit the rates to distant locations. I do not know how this is done. The egg heads are also looking for ways to automate/computerize the testing procedure. I do not have information on building a radionics testing device or "Abrams machine" To build an activation device start with a small project box.
