Automation: Paving the way for progress. Ask automotive manufacturers what their primary concerns are today within warehouses and factories and they will probably allude to one of three key things – productivity, safety and waste. Although various solutions are available to help alleviate problems in these areas, one of the most important is materials handling technology.

the Industrial Internet of Things (IIoT) to drive process optimisation.

Paving the way for digital transformation

Industrial Ethernet is actually one of the key drivers behind Industry 4.0 and the IIoT as it enables a whole new level of interconnectivity and communication between people and machines as it relates to manufacturing, while providing access to real-time information that will ultimately enable better control and visibility across the supply chain, automated and streamlined maintenance, and improved collaboration and productivity – in other words, smart manufacturing.

Knowledge on automation includes new topics, such as factory and process automation, IT/OT Integration, ISA 95, Industry 4.0, IoT, etc., along with safety systems in process plants and machines

Describes facets of CAD/CAM. Illustrates how each is tied together in an integrated system. Serves as a text for college-level courses in mechanical or manufacturing engineering; for professional in-house training programs & seminars.

The book begins with an overview of automation history and followed by chapters on PLC, DCS, and SCADA – describing how such technologies have become

Get Free Industrial Automation Paving The Way For Smartpac

synonymous in process instrumentation and control. The book then introduces the niche of Fieldbuses in process industries. It then goes on to discuss wireless communication in the automation sector and its applications in the industrial arena. The book also discusses the all-pervading IoT and its industrial cousin, IIoT, which is finding increasing applications in process automation and control domain. The last chapter introduces OPC technology which has strongly emerged as a de facto standard for interoperable data exchange between multi-vendor software applications and bridges the divide between heterogeneous automation worlds in a very effective way. Key features:
Presents an overall industrial

is a reviewer of IEEE, Elsevier, Springer, Acta Press, Sage, and Taylor & Francis Publishers. He has more than 80 papers in international journals and conference publications. His research interests include intelligent process control using conventional, fuzzy, and neuro-fuzzy techniques. Dr. Sunit Kumar Sen is an ex-professor, Department of Applied Physics, Instrumentation Engineering Section, University of Calcutta. He was a coordinator of two projects sponsored by AICTE and UGC, Government of India. He has published around 70 papers in international and national journals and conferences and has published three books – the last one was published by CRC Press in 2014.

Get Free Industrial Automation Paving The

Way For Smart Manufacturing, Elsevier. His field of interest is new designs of ADCs and DACs.

The automation of physical and information logistics processes is one of the most challenging developments in logistics but is increasingly necessary in order to adequately deal with the increasing dynamics and uncertainties arising in logistics networks. If the automation of processes in logistics is systematically driven forward today, autonomous logistics systems are even conceivable in the future if the potential of digitalization is exploited. While some companies are already innovating in this area, the majority are still in the early stages of development. This book

Get Free Industrial Automation Paving The

Way For Smart Applications comprises the articles of a Special Issue on the application areas and potentials of automation in logistics on the path to autonomous logistics systems. The scientific contributions intend to contribute to a lively discourse in practice. The articles cover a broad spectrum of physical and informational automation applications with high practical relevance in individual subareas of logistics (e.g., production and transport) or in connection with the entire logistics network. Topics of IoT applications in intralogistics or holistic approaches of data-driven production logistics as well as autonomous driving or digital twin approaches for intermodal transport chains are covered. The
