Our services are highly relationship-based with a focus on providing custom solutions that are user and operator-friendly.

The developments in digital television technology provide the unprecedented opportunity to drastically extend the role of television as a content delivery channel. E-health, e-commerce, e-government, and e-learning are only a few examples of value-added services provided over digital televisions infrastructures. These changes in the television industry challenge companies to adjust their strategies in order to meet the opportunities and threats in this new environment. Interactive Digital Television: Techniques and Applications presents the developments in the domain of interactive digital television covering both technical and business aspects. This book focuses on analyzing concepts, research issues, and methodological approaches, presenting existing solutions such as systems and prototypes for researchers, academicians, scholars, professionals and practitioners.

Wolfgang Glatthaar International Business Machines (IBM), Gennany The rapid developments in information technology (IT) will continue through the coming years. New application areas will be added. Whereas the use of information technology in the past decade has been concentrated primarily on business and public administration, in future the suppliers of information technology will develop an increasing number of applications for the private household (see fig. 1). Traditional perspective: New perspective: 'IT-solutions for the "IT-solutions for the company' private household" ~ \ \ \ \ \ \ \ \ \ Fig. 1. New perspective on information technology This development has already generated considerable market dynamics. Latest forecasts for the USA suggest that by 1996 at the latest the private household will present greater sales potential for home computers than business and public administration. VI Preface Up to now the use of information technology in the private household has not been regarded as highly significant by either business or science, even though PCs have become widespread in the private sphere. In the ESPRIT framework there have been individual projects dealing with home networks, and in a number of Asian and European countries, as well as America, experiments with interactive television are taking place. Internet and commercial online services are experiencing rapid growth. This application area for information technology in the private household, which is generating increasing business attention, must also be the subject of appropriate research activities.

Presents Media-Link Interactive Communications, a company located in Louisville, Kentucky, that specializes in providing digital solutions and services to both the home user and the corporate community. Contains an overview and history of the company, which offers services in communications, multi-media, online connectivity, Internet consulting, WWW, e-mail, computer applications and Internet training, and graphics design. Links to business and personal WWW pages created by the company.

Read Book Interactive Digital Solutions

This book is a comprehensive review of the current state of digital innovation, Internet activity and e-business in the life sciences arena and a practical guide for managers planning, developing and implementing e-strategies in the pharmaceutical industry. The authors provide numerous examples of innovative, best practice and lay the strategic foundation for using e-business across the pharmaceutical value chain from drug discovery to physician promotion to direct-to-consumer marketing.

The book is concerned with narrative in digital media that changes according to user input—Interactive Digital Narrative (IDN). It provides a broad overview of current issues and future directions in this multi-disciplinary field that includes humanities-based and computational perspectives. It assembles the voices of leading researchers and practitioners like Janet Murray, Marie-Laure Ryan, Scott Rettberg and Martin Rieser. In three sections, it covers history, theoretical perspectives and varieties of practice including narrative game design, with a special focus on changes in the power relationship between audience and author enabled by interactivity. After discussing the historical development of diverse forms, the book presents theoretical standpoints including a semiotic perspective, a proposal for a specific theoretical framework and an inquiry into the role of artificial intelligence. Finally, it analyses varieties of current practice from digital poetry to location-based applications, artistic experiments and expanded remakes of older narrative game titles.

Technology is meant to make life easier and to raise its quality. Our interaction with technology should be designed according to human needs instead of us being required to adapt to technology. Even so, technology may change quickly and people and their habits change slowly. With the aim of supporting user acceptance of iTV, the focus of this book is on the usability of iTV applications. A method for developing interaction design patterns especially for new technologies is presented for the first time. The main characteristics covered in this new approach are: systematic identification of recurrent design problems; usability as a quality criterion for design solutions; integration of designers into the pattern development process including identification of designers' needs, and iterative evaluation and optimisation of patterns to encourage designers to accept and use them; usability testing to identify proven design solutions and their trade-offs; presentation of specific design guidelines.

This book is ideal for teachers looking to optimise STEM in the classroom. In recent times there has been a strong call to increase the focus on STEM activities in Australian schools. By offering STEM in primary schools, it is hoped that students will operate more effectively in the science and technology based society in which they live. This book is one of a two-set series which connects students with Science, Technology, Engineering and Maths.

InfoWorld is targeted to Senior IT professionals. Content is segmented into Channels and Topic Centers. InfoWorld also celebrates people, companies, and projects.

Interactive Digital Storytelling has evolved as a prospering research topic banding together formerly disjointed disciplines stemming from the arts and humanities as well as computer science. It's tied up with the notion of storytelling as an effective means for the communication of

knowledge and social values since the existence of humankind. It also builds a bridge between current academic trends investigating and formalizing computer games, and developments towards the experience-based design of human-media interaction in general. In Darmstadt, a first national workshop on Digital Storytelling was organized by ZGDV e.V. in 2000, which at that time gave an impression about the breadth of this new research field for computer graphics (DISTEL 2000). An international follow-up was planned: the 1st International Conference on Technologies for Interactive Digital Storytelling and Entertainment (TIDSE 2003). Taking place in March 2003, it showed a more focussed range of research specifically on concepts and first prototypes for automated storytelling and autonomous characters, including modelling of emotions and the user experience. At TIDSE 2004, an established and still-growing community of researchers gathered together to exchange results and visions. This confirms the construction of a series of European conferences on the topic – together with the International Conference on Virtual Storytelling, ICVS (conducted in 2001 and 2003 in France) – which will be further cultivated.

For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.
