The 39 self-contained sections in this book present worked-out examples as well as many sample problems categorized by the level of difficulty as Bronze, Silver, and Gold in order to

help the readers gauge their progress and learning. Detailed solutions to all problems in each section are provided at the end of each chapter. The book can be used not only as a text but also for self-study. The text covers algebra (solving single equations and systems of equations of varying degrees, algebraic manipulations for creative problem solving, inequalities, basic set theory, sequences and series, rates and proportions, unit analysis, and percentages), probability (counting techniques, introductory probability theory, more set theory, permutations and combinations, expected value, and symmetry), and number theory (prime factorizations and their applications, Diophantine equations, number bases, modular arithmetic, and divisibility). It focuses on guiding students through creative problem-solving and on teaching them to apply their knowledge in a wide variety of scenarios rather than rote memorization of mathematical facts. It is aimed at, but not limited to, high-performing middle school students and goes further in depth and teaches new concepts not otherwise taught in traditional public schools.

Betsy Stevenson is praying fervently for a change. But when a big part of her prayer is answered she asks the Lord, "Is this really You? An RV, of all things." According to Ben (her hubby and a workaholic), he thinks retiring at 60, buying an RV and traveling is a grand idea. He says, "I've been talking to Matilda (their pooch) and the Lord and I feel it's a go. After much more prayer and preparation Betsy agrees and they begin the journey to downsize into a 38 foot 5th wheel. Then their RV adventure begins. Their best friends Rose and Larry Wilford tag along and the four get On the Road Again. Yes, Willie Nelson joins them - if only in song - on the highways and byways of this great country called the U.S.A. While on the road the foursome encounter a near miss with a lamp post, a not-too-happy proprietor at an RV Park, and a 1000

year flood that hits Colorado. Can the four of them survive their travels together and learn to live, laugh and love more and grump less? Or is the Lord taking them on this path to learn more about themselves than they ever wanted to know? And in the end, do they find it is better to give than receive? Follow along with the Early Birds on their adventures and I'm sure you'll want to join up with them ASAP. All you need is a sense of humor, willingness to change, And, of course, a recreational vehicle. Any size will do.

A comprehensive guide to modern geometric methods for signal and image analysis, from basic principles to state-of-the-art concepts and applications.

Visualization research aims to provide insight into large, complicated data sets and the phenomena behind them. While there are di?erent methods of reaching this goal, topological methods stand out for their solid mathem- ical foundation, which guides the algorithmic analysis and its presentation. Topology-based methods in visualization have been around since the beg- ning of visualization as a scienti?c discipline, but they initially played only a minor role. In recent years,interest in topology-basedvisualization has grown andsigni?cantinnovationhasledto newconceptsandsuccessfulapplications. The latest trends adapt basic topological concepts to precisely express user interests in topological properties of the data. This book is the outcome of the second workshop on Topological Methods in Visualization, which was held March 4–6, 2007 in Kloster Nimbschen near Leipzig,Germany.Theworkshopbroughttoget hermorethan40international researchers to present and discuss the state of the art and new trends in the ?eld of topology-based visualization. Two inspiring invited talks by George Haller, MIT, and Nelson Max, LLNL, were

accompanied by 14 presentations by participants and two panel discussions on current and future trends in visualization research. This book contains thirteen research papers that have been peer-reviewed in a two-stage review process. In the ?rst phase, submitted papers where peer-reviewed by the international program committee. After the workshop accepted papers went through a revision and a second review process taking into account comments from the ?rst round and discussions at the workshop.
