Sets the standard for introducing the field of comparative politics
This text begins by laying out a proven analytical framework that is accessible for students new to the field. The framework is then consistently implemented in twelve authoritative country cases, not only to introduce students to what politics and governments are like around the world but to also understand the importance of their similarities and differences. Written by leading comparativists and area study specialists, Comparative Politics Today helps to sort through the world's complexity and to recognize patterns that lead to genuine political insight. MyPoliSciLab is an integral part of the Powell/Dalton/Strom program. Explorer is a hands-on way to develop quantitative literacy and to move students beyond punditry

For courses in Machine Design. An integrated, case-based approach to machine design Machine Design: An Integrated Approach, 6th Edition presents machine design in an up-to-date and thorough manner with an emphasis on design. Author Robert Norton draws on his 50-plus years of experience in mechanical engineering design, both in industry and as a consultant, as well as 40 of those years as a university instructor in mechanical engineering design. Written at a level aimed at junior-senior mechanical engineering

“Engineers create many of the inventions that shape our society, and as such they play a vital role in determining how we live. This new book does an outstanding job of filling in the knowledge and perspective that engineers must have to be good citizens in areas ranging from the environment, to intellectual property, to ensuring the health of the innovation ecosystem that has done so much for modern society. This is exactly the sort of book that engineers and those who work with them should read and discuss over pizza, coffee, or some other suitable, discussion-provoking consumable.”
—John L. Hennessy, president, Stanford University “Citizen Engineer is the bible for the new era of socially responsible engineering. It’s an era where, as the authors show, engineers don’t

just need to know more, they need to be more. The work is an inspiration, an exhortation, and a practical how-to guide. All engineers concerned with the impact of their work—and that should be all engineers—must read this book.” —Hal Abelson, professor of computer science and engineering, MIT “Code is law. Finally, a map to responsible law making. This accessible and brilliant book should be required of every citizen, and especially, the new citizen lawmakers we call engineers.” —Lawrence Lessig, director, Safra Center for Ethics, Harvard University, and cofounder, Creative Commons Being an engineer today means being far more than an engineer. You need to consider not only the design requirements of your projects but the full impact of your work—from an ecological perspective, an intellectual property perspective, a business perspective, and a sociological perspective. And you must

coordinate your efforts with many other engineers, sometimes hundreds of them. In short, we've entered an age that demands socially responsible engineering on a whole new scale: The era of the Citizen Engineer. This engaging and thought-provoking book, written by computer industry luminaries David Douglas and Greg Papadopoulos, focuses on two topics that are becoming vitally important in the day-to-day work of engineers: eco engineering and intellectual property (IP). Citizen Engineer also examines how and why the world of engineering has changed, and provides practical advice to help engineers of all types master the new era and start thinking like Citizen Engineers.
