This chapter highlights various ways Asia's growth has affected the world economy. The chapter also shows that if currency trends continue, the Asian economy is expected to be larger than that of the United States and Europe combined. Some Asian countries offer sophisticated financial markets and are centers for technological innovation, while others are largely agricultural. The study shows that the region is home to 700 million poor people, about 65 percent of the world's poor a figure that stands in stark relief against Asia's economic strength and growing prosperity. The chapter also references the inquiry by the managing editor of the Journal of Economic Perspectives into the rich and sometimes tortured relationship between economics and virtue.

What is the link between information communication technology and women's empowerment in today's development context? How can ICT facilitate the pursuit of a better world? Exploring the rich complexity of the contexts in which they live and work, the authors of Women and ICT in Africa and the Middle East offer a multitude of perspectives and experiences, avoiding simplistic answers and solutions. Based on analyses from twenty-one research teams in fourteen countries, this much-needed, human-centred contribution to the fields of gender, development and information communication technology questions, demonstrates and suggests what it takes to wield the emancipatory potential of ICT.

In Asia, we are witnessing an era where the pendulum of power seems to be swaying towards the East with the rising strength of China and India and Singapore is at the 'crossroads' between these populous nations. Although Singapore may appear to be the most westernized country in Asia, she is nevertheless a multi-cultural Asian society. Having the most open economy in the world, Singapore is plugged into the global marketplace of education and learning. The development of human capital is used as a strategic economic driver to internationalize and transform education for sustainable competitive advantage. Singapore's education system, regarded as one of the consistently best performing in the world, offers a unique opportunity to explore issues where eastern and western culture, values, beliefs, learning and knowledge systems converge, clash, and at times diverge. This book is meant to extend our knowledge on the role of 'learning', often overlooked and taken for granted as the air that we breathe but which constantly transforms our lives and reshapes societies. It is the first book that deals with the dichotomy of 'least' and 'west' going beyond the traditional learning and education framework to other areas such as economic, socio-cultural, political, and technological dimensions that impact Singapore. It puts together key topical issues and explores the underbelly of how a small 'resourceless' independent city-state like Singapore stays ahead of the learning curve, even while facing increasingly intense global competition where the discovery and emergence of new systems for empowerment and independence and the resulting creation of new knowledge and modes of communication are challenging traditional boundaries between the virtual and real world. Contents:ForewordIntroductionA Learning State?Cultural Neuroscience in LearningThe Business of LearningSwitching between CulturesWireless Learning: A New Frontier?The East-West Learning MatrixTheories and Discourses Readership: Universities, business schools and public and private institutions conducting executive programs, libraries, private and public sector organisations, individuals, consultants, researchers, HRD/HRM directors/managers, teachers, policy-makers, etc. Keywords:Learning;Culture;Education;Marketplace;East;West;SingaporeReview: "This is a thoughtful book about the Singapore success story and its future." Tommy Koh Professor and Rector Tembusu College National University of Singapore "There is an urgent need for understanding and collaboration between people of diverse backgrounds. Dr Kumar draws on scholarship from multiple disciplines and his extensive experience in Singapore to report on approaches to learning that should be read widely." Carsten Kowalczyk Associate Professor of International Economics The Fletcher School Tufts University "Prem provides a good overview of the evolution, issues and trends in Singapore education. He nudges us to ponder whether education should be left to market forces and whether we should make changes to better prepare us for the future." Tsui Kai Chong Provost and Professor SIM University Key Features:New and original edition on educational and learning that puts together topical issues as seen from both the East and West perspectives in the context of SingaporeServes as a reference in understanding the why, what and how educational policies and practice converge

This book describes the current and most probable future wireless security solutions. The focus is on the technical discussion of existing systems and new trends like Internet of Things (IoT). It also discusses existing and potential security threats, presents methods for protecting systems, operators and end-users, describes security systems attack types and the new dangers in the ever-evolving Internet. The book functions as a practical guide describing the evolution of the wireless environment, and how to ensure the fluent continuum of the new functionalities, whilst minimizing the potential risks in network security.

This book constitutes the refereed proceedings of the five workshops that were organized in conjunction with the International Conference on Business Information Systems, BIS 2014, which took place in Larnaca, Cyprus, in May 2014. The 27 papers in this volume were carefully reviewed and selected from 53 submissions and were revised and extended after the event. The workshop topics covered applications and economics of knowledge-based technologies (AKTB), business and IT alignment (BITA), digital currencies (DC), modern applications of business information systems (MODAPP), and tools for setting up and running a business in cloud computing (TSRB). In addition a keynote paper is included in this book.

The GCC is a major player in the post-2011 reordering of the Middle East. Despite the rise in prominence of individual Gulf states - especially Kuwait, Qatar, Saudi Arabia and the United Arab Emirates - and the growth of the GCC as a collective entity, surprisingly little attention has been paid to the actual mechanics of policy-making in the region. This book analyses the vital role that institutions are coming to play in shaping policy in the Gulf Arab states. The research coincides with two key developments that have given institutions new importance in the policy process: the emergence of a new generation of leaders in the Gulf, and the era of low oil prices. Both developments, along with dramatic demographic change, have compelled state and citizens to re-evaluate the nature of the social contract that binds them together. Contributors assess the changing relationship between state and citizen and evaluate the role that formal and informal institutions play in mediating such change and informing policy.The book shows how academic, social and economic institutions are responding to the increasingly complex process of decision-making, where citizens demand better services and further empowerment, and states are obliged to seek wider counsel, although wanting to retain ultimate authority. With contributions from both academics and practitioners, this book will be highly relevant for researchers and policymakers alike.

This internationally conducted study of the latest construction industry practices addresses a broad range of Information and Communication Technology applications. Drawing on research conducted in the US and UK, this book presents the state of the art of various ebusiness processes, and examines BIM, virtual environments and mobile technologies. Innovation is a theme that runs throughout this book, so in addition to the direct impact of these new technical achievements, it also considers the management styles that helped them to emerge. Examples from industry are illustrated with case studies and presented alongside research from some of the best known academics in this field. This book is essential reading for all advanced students and researchers interested in how ICT is changing construction management and the construction industry.

The emergence of cloud computing, internet of things, mobile technologies, and social networking have created better-connected members of the public who are digitally linked with each other in real time. Establishing this two-way interaction between citizens and governments has thus become attractive and an expected feature of governments worldwide. Previously, federal and local governments relied on first-generation technologies to provide basic levels of automation and digitization. Now, because of their desire to become more open, transparent, accountable, and connected, newer technologies including cloud computing, mobile networking, big data analytics, Web 2.0, and social media must be developed and utilized. Web 2.0 and Cloud Technologies for Implementing Connected Government is an essential reference source that presents various dimensions of connected government and connected e-governance visions as well as the latest emerging technologies. Offering development methodologies, practical examples, best practices, case studies, and the latest research, this book covers new strategies for implementing better-connected government models and the technologies that serve to establish these frameworks, including in-depth examinations of mobile

technologies, automation, business intelligence, etc. as well as the various ethical and security issues surrounding the use and protection of data. This book is essential for federal, state, and local government officials; policymakers; civil servants; IT specialists; security analysts; academicians; researchers; and students.

Information and Communication Technologies (ICT) are rapidly evolving and taking centre stage in everyday life in the 21st century alongside the increasing importance and value of information. This is particularly evident in the transport sector where
