It is tries to quantify meteorological phenomena which is a good thing since meteorology is a science. However, some numerical results are not

discussed since they are counter-intuitive. For example, at page 208, the author states that for a thermal rising to 1000 metres (3300 feet), the vertical velocity would be 3.65 m/s (i.e. 7 knots) and the diameter

of the thermal
would be 1
kilometre (1/2
mile) which is
totally
unrealistic.
