Operant conditioning is a learning theory that was postulated by Burrhus Frederic Skinner and it states that learning takes place through rewards and punishments for certain behavior. In other words, through operant conditioning, a correlation between particular conduct and the consequences of this kind of conduct is built (Coon & Mitterer, 2008).

To study operant conditioning, Skinner conducted experiments using a "Skinner Box," a small box that had a lever at one end that would provide food or water when pressed. An animal, like a pigeon or rat, was placed in the box where it was free to move around. Eventually the animal would press the lever and be rewarded. Skinner found that this process resulted in the animal pressing the ...

## ~~What Is Operant Conditioning? Definition and Examples~~

Operant conditioning is a method of learning that occurs through rewards and punishments for behavior. Through operant conditioning, an individual makes an association between a particular behavior and a consequence. B.F Skinner is regarded as the father of operant conditioning and introduced a new term to behavioral psychology, reinforcement.

## ~~Recent Trends in Operant Conditioning Research Paper ...~~

Operant conditioning tries to negate the belief that internal thoughts and mere motivations would bring about learning a behavior. As a behaviorist, Skinner thought that only external causes of behavior should be considered. The term "operant" was used by Skinner in order to give us a good overview of his theory. By this term, he meant that this type of conditioning involves only external ...
