study. One fundamental prerequisite is fluency in a "basic language": this provides a common framework in which to exchange ideas, care-fully formulate problems and actively work toward their solutions. In modern science and engineering, college mathematics has become this "basic language", beginning with precalculus, moving into calculusand

Precalculus - University of Washington

First let's look at the easiest way to create a new function from existing functions: performing basic arithmetic operations. Example 1: If $f(x) = x^2 - 2x - 3$ and $g(x) = x + 1$, find the following. Note that the domain of the new function is all real numbers except for $x = -1$, which is different than the domain of both $f(x)$ and $g(x)$.
