Print a read and math workbook with The Protist Kingdom reading comprehension. You need to use this workbook in your classroom. Great mix of reading and math.

Explores the appearance, characteristics, and behavior of protists and fungi, lifeforms which are neither plants nor animals, using specific examples such as algae, mold, and mushrooms.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Eukaryotic Microbes presents chapters hand-selected by the editor of the Encyclopedia of Microbiology, updated whenever possible by their original authors to include key developments made since their initial publication. The book provides an overview of the main groups of eukaryotic microbes and presents classic and cutting-edge research on content relating to fungi and protists, including chapters on yeasts, algal blooms, lichens, and intestinal protozoa. This concise and affordable book is an essential reference for students and researchers in microbiology, mycology, immunology, environmental sciences, and biotechnology. Written by recognized authorities in the field Includes all major groups of eukaryotic microbes, including protists, fungi, and microalgae Covers material pertinent to a wide range of students, researchers, and technicians in the field

An encyclopedia designed especially to meet the needs of elementary, junior high, and senior high school students.

Teaching Primary Science Constructively helps readers to create effective science learning experiences for primary students by using a constructivist approach to learning. This best-selling text explains the principles of constructivism and their implications for learning and teaching, and discusses core strategies for developing science understanding and science inquiry processes and skills. Chapters also provide research-based ideas for implementing a constructivist approach within a number of content strands. Throughout there are strong links to the key ideas, themes and terminology of the revised Australian Curriculum: Science. This sixth edition includes a new introductory chapter addressing readers' preconceptions and concerns about teaching primary science.

Phylum Multiple Choice Questions and Answers (MCQs): Quizzes & Practice Tests with Answer Key (Phylum Quick Study Guide & Course Review) covers course assessment tests for competitive exams to solve 600 MCQs. "Phylum MCQ" with answers covers fundamental concepts with theoretical and analytical reasoning tests. "Phylum Quiz" PDF study guide helps to practice test questions for exam review. "Phylum Multiple Choice Questions and Answers" PDF book to download covers solved quiz questions and answers PDF on topics: Introduction to phylum, amphibians: first terrestrial vertebrates, animal like protist and animalia, animal like protist: protozoa, annelida: metameric body form, arthropods: blueprints for success, birds: feathers, flight classification and endothermy, echinoderms, fishes: vertebrate success in water, hemichordata and invertebrates chordates, hexapods and myriapods: terrestrial triumphs, mammals: specialized teeth, endothermy, hair and
