From 1980 to 2000, Camel Trophy took more than 500 amateur competitors from 35 countries on extraordinary and challenging adventures. On most of these events, teams drove specially prepared Land Rovers to the limit and beyond in locations as varied as Borneo, Mongolia, Papua New Guinea and Tanzania. Camel Trophy charts the history of the event and tells the incredible stories resulting from the constant challenge to both man and machine.. As one of the official photographers on the last four events, author Nick Dimbleby ' s first-hand account, the shared experiences of competitors, along with contemporary reports and extensive new interviews of key event leaders, all combine to make Camel Trophy a gripping tale of adventure, adversity, technological change and logistical challenge. Illustrated with a stunning collection of photographs including never-before-published, behind-the-scenes shots, this meticulously researched publication can legitimately claim to be the definitive history of the Camel Trophy.

Launched in 1945 and commissioned two years later, submarine HMS Alliance was built for service with the Royal Navy in the Far East. Alliancehad a long and distinguished career of more than 28 years that took her all over the world. Today, Alliance is the centrepiece at the Royal Navy Submarine Museum, Gosport, where the submarine experience is brought to life by tours around the boat. Former submariner and historian Peter Goodwin gives Alliance the Haynes Manual treatment, examining in detail her construction and restoration, and describing what it was like to live, work and go to war in a submarine.

When installing or servicing an air conditioning or refrigeration system, two of the most important tasks performed by technicians are refrigerant recovery and system evacuation. In order to perform these tasks properly, and in a safe manner, technicians need to understand the theory behind them, having a working knowledge of the equipment and tools used, and employ accepted industry best practices. This e-book walks through each step of both tasks, while covering safety, theory, and application. Also covered are leak detection methods and filter drier use. System Recovery and Evacuation was written by HVACR instructors for HVACR instructors to provide sound, relevant information in a single source. This e-book provides students and practicing technicians with the information and knowledge necessary to understand refrigerant recovery, system evacuation, leak detection, and filter driers. It is full of color illustrations and includes worksheets that provide students and practicing technicians with the information and knowledge necessary to accurately and safely install or service air conditioning and refrigeration systems. The end of the e-book contains fill-in-the-blank questions that review the content of the entire manual.
