The present Rural Development Policy and Strategies underscores one basic objective with regard to economic development, i.e. to build a market economy in which: i) a broad spectrum of the Ethiopian people are beneficiaries; ii) dependence on food aid is eliminated; and, iii) rapid economic growth is assured. Given the dominance of agriculture in the Ethiopian economy, i.e. agriculture contributes to about 80% of employment, the rural development effort is presently associated with ...

rural development.

### **Rural Development in India: Meaning, Objectives and Strategies**

Rural development is the process of improving the quality of life and economic well-being of people living in rural areas, often relatively isolated and sparsely populated areas. Rural development has traditionally centered on the exploitation of land-intensive natural resources such as agriculture and forestry.

Despite the fact that three quarters of the world's poor live in rural areas, the level of international development aid directed at rural areas has continued to decline over the last decade, particularly in terms of the agricultural sector. In 2001, lending for agricultural projects was the lowest in the World Bank's history. This publication presents the World Bank's new rural development strategy based upon a results oriented approach which stresses practice, implementation, monitoring and empowerment aspects. The strategy seeks to highlight rural development efforts, focusing on the needs of the rural poor, fostering a broad-based economic growth and addressing the impact of global developments on client countries.

This book provides an overview of the underlying problems in delivering services to rural regions.

Addressing rural development is key for Ethiopia's growth process. A series of government-led structural reforms have contributed to sustained growth in the country over the last two decades as well as to considerable poverty reduction in rural areas. However, Ethiopia faces critical challenges it will need to overcome to meet the needs of a growing rural population. In practice, this will require updating the existing rural development strategy in order to better integrate the interaction of rural and urban areas. Policy approaches that account for the fast urbanisation process experienced in the country will therefore be key to improving the well-being of rural populations and promoting national growth. This report takes a spatial approach to study Ethiopia's rural development strategies. It highlights the need to develop stronger and more functional linkages between rural and urban areas. As such, the development of intermediary cities and small urban centres provides large scope for inclusive rural transformation. The report is the result of rigorous analysis, and extensive consultations with national and international stakeholders. It identifies some of the key challenges faced by rural areas and provides a series of recommendations to enhance Ethiopia's rural development strategies.

The purpose of this diagnostic report is to establish an analytical basis for defining strategic priorities in agriculture and rural development in Croatia, as the country prepares its National Agriculture and Rural Development Strategy and formulates its Strategic Plan for the European Union's (EU) Common Agricultural Policy (CAP) for the next programming period (2021-2027). The diagnostic report assesses country-specific strengths, weaknesses, opportunities and threats (challenges) in the context of the macro-trends and issues affecting Croatian agriculture today, the ongoing EU CAP reform process, and broader national development directions. This diagnostic report is based on a series of background documents prepared by the World Bank as key inputs. Both advanced economic analysis and qualitative assessments were carried out as part of an evidence-based process for sector strategy development and policy guidance. Specifically, the analysis focuses on a range of strategic themes related to agriculture and rural development in Croatia, including (i) Croatian agricultural policy and the current CAP; (ii) the efficiency, effectiveness, and equity of current public spending on agriculture and rural development; (iii) the subsidy intensity of income for different farm types, (iv) backward and forward economic linkages of the agriculture and food processing sectors; (v) economy-wide impacts of agriculture and rural development support measures; (vi) agriculture finance and risk management solutions; (vii) the agricultural knowledge and innovation system (AKIS); (viii) food safety, sanitary and phytosanitary (FSandSPS) policies; (ix) trade and strategic market segmentation; (x) agroecological and climate aspects; and (xi) the development of sustainable and circular bio-economies in Croatia. In addition, this report brings forward some key elements of an in-depth sectoral review and policy analysis carried out as an input to the ongoing formulation of Croatia's broader National Development Strategy (NDS).

A wide-ranging exploration of the issues shaping development in rural North America for the years ahead This unique volume presents guidelines for dealing with the problems of development in rural areas, with coverage that encompasses theory, strategic planning and policy implementation, and practical

experience. It contains an in-depth examination of the problems faced by rural American towns, communities, and families, and it explores a range of innovative solutions based on the concepts of sustainable use of indigenous talents and resources. Contributions by leading experts and seasoned practitioners represent a broad spectrum of experience and ideological outlook, making Rural Sustainable Development in America must reading for anyone involved in community development; rural geography, planning, and economic development; public administration; agricultural economics; and public policy. The book covers: \* Historical, philosophical, and ecological foundations of sustainable development in the rural context. \* Principles of a rural sustainable future in which development policies embrace holistic and interactive views of ethics, ecology, economics, and sociopolitical systems. \* Different approaches to policy and planning strategy at the regional and local level. \* The role of citizen involvement and empowerment in choosing and effecting change in community life. \* Real-world experiences with alternative rural-urban symbioses in agriculture, waste management, greenways, and trails. \* Analysis of specific community-based efforts at regional revitalization in Indiana, Central Appalachia, and Eastern Canada. The development of an energy and technology intensive, global agricultural production system over the last few decades has had a devastating impact on traditional rural communities--from the decline of family farms to the virtual depopulation of small towns on a wide scale. But across this bleak landscape, many communities are planning and taking action to assure their development in sustainable ways. What are the visions, assumptions, and practical considerations guiding these efforts? How can communities address the obstacles they face in designing and implementing policies that will foster and support regeneration? Providing invaluable insight into these questions, Rural Sustainable Development in America offers a multidimensional look at theory, strategic planning, and real-world experience that provides planners and others with important tools to use in cultivating a sustainable future for rural America. Contributions by leading experts from a range of disciplines first explore the philosophical and ecological underpinnings of sustainable development within a global and local context. The second part of the book examines regional and local planning and policy issues, and the final section assesses the success or failure of alternative rural-urban symbioses in agriculture, waste management, greenways and trails, and regional revitalization. Encompassing several shades of "greenness," this thought-provoking volume truly reflects the diversity of views and approaches that are driving the theory and practice of rural development into the twenty-first century. It is a vital addition to the literature that will inform readers of every ideological orientation and professional perspective--in such areas as rural geography, planning, policy, and economic development; agricultural economics; landscape architecture; and public administration.

Agricultural policy has addressed organic farming making it an inherent part of the Common Agricultural Policy. Researchers have turned their attention to the role of organic farming in the rural economy and specifically, the potential for organic farming to contribute to sustainable rural development. Contrary to the situation in Europe, there is no research on organic farming policies and on the potential implications of the latest on rural development in Albania. Considering the experience in EU, it can be argued that policy measures would foster the development of organic farming. Although the Albanian government has declared the willingness to support organic farming as well as to use it as a policy instrument for the development of rural areas, it has not analysed this sector and has no precise idea on what kind of policy measures to use for supporting it. That is what this research has attempted. Most of the recommendations of this research are already incorporated in three strategic documents: "Action Plan for Organic Farming in Albania", "Agriculture and Food Strategy 2007 - 2013" and "Rural Development Strategy".

Focusing on the demands of the new innovative, sustainable and inclusive rural development paradigm, the monograph raises the discussion regarding new approaches and success factors that are vital in current rural socio-economic development and policy transformations. The bottom-up policymaking, self-organization, creative use of knowledge in rural areas, and many other rural innovations are aligned in this book with new social movements' theories, which help disclose, explore and explain the rural development paradigm shift. Rural development forces of the 21st century center on the agents of change - rural population, and, surprisingly - urban population(!), and the political debate concerning EU Common Agricultural Policy and European Green Deal, illustrated with multiple case studies. This book will be of interest to a broad audience of readers, keen on scientific, political, and practical issues of innovations in rural areas and their future development pathways. The monograph is authored by a team of scholars from the Lithuanian Centre for Social Sciences, Institute of Economics and Rural Development, Department of Rural Development.
