This book gathers the latest advances, innovations, and applications in the field of aerospace technology and aviation safety, as presented by researchers at the 9th World Congress “Aviation in the XXI Century”: Safety in Aviation and Space Technologies, held in Kyiv, Ukraine, on April 26-28 2021. It covers highly diverse topics, including carbon neutral aviation, precision engineering in aerospace, robots in the aerospace industry, nanotechnology for aerospace, aircraft design and strength, tribotechnology in aviation, engines and power installations, intelligent robotic and measuring systems, control systems, civil aviation cybersecurity, mathematical modeling and numerical methods, aeronavigation, unmanned aerial complexes, environmental safety and aviation chemmotology, aviation transport logistics, and construction of transport facilities. The contributions, which were selected by means of a rigorous international peer-review process, highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations.

Ecosystem Service Potentials and Their Indicators in Postglacial Landscapes: Assessment and Mapping provides valuable guidance for anyone involved with ecosystem service potential monitoring, use and management--from landscape ecologists and environmental managers, to policymakers and environmental economists. The book highlights effective measurement tools for evaluating the overall potential of ecosystem services from multiple perspectives. Beginning with an introduction to ecosystem services and the theoretical assumptions and objectives associated with their assessment, the book goes on to outline interdisciplinary methods of evaluation and analysis that are fully supported and illustrated throughout using an insightful case study focused on Wigry National Park. A range of different spatial reference units are also discussed, followed by chapters on both analytical and synthetic approaches to identifying service supply potential. In addition, the use of services and the impact of these uses on the assessment of potential is included, along with a discussion of the future shape of ecosystem service assessment. Outlines a transdisciplinary, holistic approach to assessing the overall potential of ecosystems and landscapes to support different ecosystem services Proposes a range of direct, indirect, simple and complex measurement indicators for multifaceted estimation and mapping Presents tools and guidelines to help shape effective decision-making processes in nature conservation and environmental planning

Advances in Ecological Research is one of the most successful series in the highly competitive field of ecology. Each volume publishes topical and important reviews, interpreting ecology as widely as in the past, to include all material that contributes to our understanding of the field. Topics in this invaluable series include the physiology, populations, and communities of plants and animals, as well as landscape and ecosystem ecology. Presents the most updated information on the field of ecology, publishing topical and important reviews Provides all information that relates to a thorough understanding of the field Includes data on physiology, populations, and communities of plants and animals New ideas on ES Integrative approach working across a variety of levels of biological organization and spatial and temporal scales Diversity of relevant subjects covered

This best-seller for busy fleet operators, now in its 42nd edition, provides essential information and advice on transport legislation, technical standards and goods vehicle operations. Lowe’s Transport Manager’s and Operator’s Handbook is a truly comprehensive guide to the legal, operational and environmental factors that are of the utmost importance in today’s road transport industry - including professional competence, working times and driving hours rules, speed cameras and penalties, the international road haulage market, and drugs testing for drivers. The Handbook is the essential reference source for any transport manager, fleet operator, owner-driver haulier or student with an involvement in the industry.

Lowe’s Transport Manager’s and Operator’s Handbook is a truly comprehensive guide to the legal, operational and environmental factors that are of the utmost importance in today’s road transport industry - including professional competence, working times and driving hours rules, speed cameras and penalties, the international road haulage market, and drugs testing for drivers. The Handbook is the essential reference source for any transport manager, fleet operator, owner-driver haulier or student with an involvement in the industry.

More complex and imposing than any other vehicle in the British emergency services, the fire engine has a long and interesting history. The earliest water pumps had been developed by the eighteenth century – basic manual pumps that had to be hauled around by people or horses, and were often only used on fire-insured premises. In the nineteenth and twentieth centuries horse-drawn, steam-powered fire engines, and eventually motorised fire engines, came to revolutionise firefighting, offering far greater versatility and the brigades came to be run by the municipalities. In this beautifully illustrated introduction, Eddie Baker charts the history of fire engines and their variants, and the increasingly complex equipment they have carried, such as high-rise ladders and high-pressure hoses. He also explains the wider history of the fire service and how the engines have been shaped by its needs and, most importantly, those of the firefighters themselves.

Through a series of studies, the overarching aim of this book is to investigate if and how the digitalization/digital transformation process affects various welfare services provided by the public sector, and the ensuing implications thereof. Ultimately, this book seeks to understand if it is conceivable for digital advancement to result in the creation of private/non-governmental alternatives to welfare services, possibly in a manner that transcends national boundaries. This study also investigates the possible ramifications of technological development for the public sector and the Western welfare society at large. This book takes its point of departure from the 2016 Organization for Economic Co-operation and Development (OECD) report that targets specific public service areas in which government needs to adopt new strategies not to fall behind. Specifically, this report emphasizes the focus on digitalization of health care/social care, education, and protection services, including the use of assistive technologies referred to as “digital welfare.” Hence, this book explores the factors potentially leading to whether state actors could be overrun by other non-governmental actors, disrupting the current status quo of welfare services. The book seeks to provide an innovative, enriching, and controversial take on society at large and how various aspects of the public sector can be, and are, affected by the ongoing digitalization process in a way that is not covered by extant literature on the market. This book takes its point of departure in Sweden given the fact that Sweden is one of the most digitalized countries in Europe, according to the Digital Economy and Society Index (DESI), making it a pertinent research case. However, as digitalization transcends national borders, large parts of the subject matter take on an international angle. This includes cases from several other countries around Europe as well as the United States.
