During the period April 25th to May 10th, 1984 the 3rd Course of the International School of Advanced Geodesy entitled "Optimization and Design of Geodetic Networks" took place in Erice. The main subject of the course is clear from the title and consisted mainly of that particular branch of network analysis, which results

Bookmark File PDF Sokkia Dt610 Manual

from applying general concepts of mathematical optimization to the design of geodetic networks. As always when dealing with optimization problems, there is an a-priori choice of the risk (or gain) function which should be minimized (or maximized) according to the specific interest of the "designer", which might be either of a

Bookmark File PDF Sokkia Dt610 Manual

scientific or of an economic nature or even of both. These aspects have been reviewed in an introductory lecture in which the particular needs arising in a geodetic context and their analytical representations are examined. Subsequently the main body of the optimization problem, which has been conventionally divided into zero, first,

Bookmark File PDF Sokkia Dt610 Manual

second and third order design problems, is presented. The zero order design deals with the estimability problem, in other words with the definition of which parameters are estimable from a given set of observations. The problem results from the fact that coordinates of points are not univocally determined from the observations of relative

Bookmark File PDF Sokkia Dt610 Manual

quantities such as angles and distances, whence a problem of the optimal choice of a reference system, the so-called "datum problem" arises.
