In *The Glass Cage*, Pulitzer Prize nominee and bestselling author Nicholas Carr shows how the most important decisions of our lives are now being made by machines and the radical effect this is having on our ability to learn and solve problems. In May 2009 an Airbus A330 passenger jet equipped with the latest 'glass cockpit' controls plummeted 30,000 feet into the Atlantic. The reason for the crash: the autopilot had routinely switched itself off. In fact, automation is everywhere – from the thermostat in our homes and the GPS in our phones to the algorithms of High Frequency Trading and self-driving cars. We now use it to diagnose patients, educate children, evaluate criminal evidence and fight wars. But psychological studies show that we perform best when fully involved in a task, while the principle of automation – that humans are

inefficient – is self-fulfilling. The glass cockpit is becoming a glass cage. In this utterly engrossing exposé, bestselling writer Nicholas Carr reveals how automation is affecting our ability to solve problems, forge memories and acquire skills. Rather than rejecting technology, Carr argues that we must urgently rethink its role in our lives, using it to enhance rather than diminish the extraordinary abilities that make us human.

"...[This book contains] invaluable material for the child therapist with varied theoretical backgrounds to more confidently apply EMDR to children." -- Frances Klaff, for Journal of EMDR Practice and Research, Volume 3, Number 3, 2009 In this book the authors present an overview of how therapists can get started in conceptualizing psychotherapy

with Eye Movement Desensitization and Reprocessing (EMDR) methodology through Adaptive Information Processing (AIP) theory. The focus of the book is to teach therapists to effectively use the entire EMDR protocol with young children. The first chapter provides a comprehensive overview of how to get started with EMDR after completing basic training. The book continues with chapters that detail the basic skills in using EMDR with children and then transitions to more advanced skills in using EMDR with children with specific diagnosis and presenting issues. They follow with a chapter summarizing the published evidence to date supporting the practice of EMDR with children. Data is then incorporated into a chapter summarizing their research on EMDR with young children in order to provide evidence of

therapists' ability to adhere to the EMDR protocol with children, and to document their research findings about training therapists to use EMDR with children. Finally, they conclude the book with goals for the future of EMDR with children while encouraging therapists to consider conducting research in order to compel the practice of EMDR with children into the mainstream of child psychotherapy. It is a major task of the book to inspire therapists to begin thinking about conducting research and how important research is to therapists in order to validate and advance the practice of psychotherapy. In the end, the most significant goal of this book is to provide best practice for children who are in need of expert psychotherapy in order to change the trajectory of their lives. The hope is to provide guidance and support to

learning features that connect real problems and examples with the fundamentals of engineering mechanics. Readers learn how to effectively analyze problems before substituting numbers into formulas. This skill prepares readers to encounter real life problems that do not always fit into standard formulas. The book begins with the analysis of particle dynamics, before considering the motion of rigid-bodies. The book discusses in detail the three fundamental methods of problem solution: force-mass-acceleration, work-energy, and impulse-momentum, including the use of numerical methods. In 1970, Sylvia Wilkinson was a writer in the category known as 'young Southern Woman Novelist'. While her novels and teaching paid the bills she had a passion for motorsports that led her to write *The Stainless Steel Carrot: An Auto Racing Odyssey*. The book profiled young up-and-coming road racer John Morton as he raced the BRE Datsun 510 in the 1971 and 1972 SCCA Trans-Am 2.5 Challenge. John won the championships and continued on a road-racing career that saw dozens of championship level victories around the country and abroad. The book, well regarded among both racers and general audience readers, has been out of print since 1973. Original copies often sell for over \$100 online and at collectors events. Now, thanks to years of requests from fans, and Sylvia's interest in animals, the book is republished

When the war ended on August 15, 1945, I was a naval engineering cadet at the Kure Navy Yard near Hiroshima, Japan. A week later, I was demobilized and returned to my home in Tokyo, fortunate not to find it ravaged by firebombing. At the beginning of September, a large contingent of the American occupation forces led by General Douglas MacArthur moved its base from Yokohama to Tokyo. Near my home I watched a procession of American military motor vehicles snaking along Highway 1. This truly awe-inspiring cavalcade included jeeps, two-and-a-half-ton trucks, and enormous trailers mounted with tanks and artillery. At the time, I was a 21-year-old student in the Machinery Section of

Engineering at the Tokyo Imperial University. Watching that magnificent parade of military vehicles, I was more than impressed by the gap in industrial strength between Japan and the U. S. That realization led me to devote my whole life to the development of the Japanese auto industry. I wrote a small article concerning this incident in Nikkei Sangyo Shimbun (one of the leading business newspapers in Japan) on May 2, 1983. The English translation of this story was carried in the July 3, 1983 edition of the Topeka Capital-Journal and the September 13, 1983 issue of the Asian Wall Street Journal. The Topeka Capital-Journal headline read, "MacArthur's Jeeps Were the Toyota Catalyst."

aimless millions crowding northern Scotland. In the year 2330, where war is obsolete and only brilliant minds are valued, she emerges into adulthood with more brawn than brains and a propensity for violence. People dismiss her as a relic, but world peace is more fragile than they know. In Valhalla, a clandestine base hidden in an icy ravine, Violet connects with a group of outcasts just like her. There, she learns the skills she needs to keep the world safe from genetically enhanced criminals and traitors who threaten the first friends she's ever known. She also meets Wulfgar Kray, a genius gang leader who knows her better than she knows herself and who would conquer the world to capture her. Branded from childhood as a useless barbarian, Violet is about to learn the world needs her exactly as she is. 1st
