Dialogues in Urban and Regional Planning 5 is a selection of some of the best scholarship in urban and regional planning from around the world. The internationally recognized authors of these award-winning papers take up a range of salient issues from the theory and practice of planning. The topics they address include the effects of globalization on world cities, metropolitan planning in France and Australia, and new research in pedestrian and traffic design. The breadth of the topics covered in this book will appeal to all those with an interest in urban and regional planning, providing a springboard for further debate and research. The papers focus particularly on themes of inclusion, urban transformation, metropolitan planning, and urban design. The Dialogues in Urban and Regional Planning (DURP) book series is published in association with the Global Planning Education Association Network (GPEAN) and its member national and transnational planning schools associations.

This book re-evaluates a rich scientific heritage of space- and history-sensitive development theories and produces an integrated methodology for the comparative analysis of urban and regional trajectories within a globalized world. The main argument put forward is that current mainstream analyses of urban and regional development have forgotten this rich heritage and fail to address the connections between different dimensions of development, the role of history and the importance of place and scale relations. The proposed methodology integrates elements from different theories - radical economic geography, regulation approach, cultural political economy, old and new institutionalism - that all share a strong concern with time and space dynamics. They are recombined into an interdisciplinary (meta)theoretical framework, capable of articulating the overall problem of socio-economic development and providing methodological anchors for comparative case-study analysis, while recognizing context specificities. The analytical methodology focuses on key dynamics and relations, such as strategic agency and collective action, institutions and structures, culture and discourse, as well as the tension between path-dependency and path-shaping. The methodology is then applied to eight urban and regional cases, mostly from Western Europe, but also from the United States and China. The case studies confirm the relevance of time- and space-sensitive analysis, not only for understanding development trajectories, but also for policy making. They ultimately highlight that, while post-war institutions were able to address systemic contradictions and foster a relatively inclusive development model, the neoliberal turn has led to reductionist policies that not only have resulted in an increase in social and spatial inequalities, but have also undermined growth and democracy.

The authors explore a new framework for evaluating economic development projects. This framework is based on a job-chain approach. Each new job created by an economic development incentive is filled by an employee who leaves behind another job. In turn, that job may be filled by someone who leaves behind their old job, etc. Such job chains end when an unemployed worker, someone not previously in the labor force, or an in-migrant to the labor market takes a vacancy. Job chains are the mechanism for observing and measuring "trickle down". The job trains model developed in this book presents new insights into local economic development evaluation and strategy.

This book attempts to introduce the theory of system science and engineering technology into the geographic research of urban-rural transformation, reveals the level-structure-function of urban-rural transformation, and promotes the scientific research on urban-rural transformation. Focusing on the systematic diagnosis of new-type urbanization, urban-rural land use, industrial structure transformation and public facilities allocation, this book explores the long-term mechanism, innovative model, and scientific way of urban-rural land optimal allocation and spatial reconstruction and develops urban-rural transformation geography. In terms of the contents, the book constructs the theory and method system of urban-rural transformation geography, analyzes the process, pattern, mechanism, and response of urban-rural transformation, reveals the evolution characteristics, types, and regional differences of urban-rural regional system, and finally puts forward the optimal decision-making of urban-rural transformation. This book not only provides references for graduate and researchers in geography, regional development, urban and rural planning, resource science, environmental science, human-earth system science, sustainability science, and other related fields but also guides the decision-making of planners and government officials.
