RLE Social and Cultural Anthropology brings together a collection of key titles from a range of historic imprints. From Anthropology and Nursing to Everyday Life, from The Gift Economy to Two-Dimensional Man, they form an essential reference source from a selection of acclaimed international authors.

Considering such witnesses of the time as Shakespeare, Dante, Petrarch, Michelangelo, Machiavelli, Montaigne, More and Bacon, Agnes Heller looks at both the concept and the image of a Renaissance man. The concept was generalised and accepted by all; its characteristic features were man as a dynamic being, creating and re-creating himself throughout his life. The images of man, however, were very different, having been formed through the ideas and imagination of artists, politicians, philosophers, scientists and theologians and viewed from the different aspects of work, love, fate, death, friendship, devotion and the concepts of space and time. Renaissance Man thus stood as both as a leading protagonist of his time, one who led and formulated the substantial attitudes of his time, and as one who stood as a witness on the sidelines of the discussion. This book, first published in English in 1978, is based on the diverse but equally important sources of autobiographies, works of art and literature, and the writings of philosophers. Although she uses Florence as a starting point, Agnes Heller points out that the Renaissance was a social and cultural phenomenon common to all of Western Europe; her Renaissance Man is thus a figure to be found throughout Europe.

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

Many influential stances within the social sciences regard nature in one of two ways: either as none of their concern (which is with the social and cultural aspects of human existence), or as wholly a social and cultural fabrication. But there is also another strand of social scientific thinking that seeks to understand the interplay between social and cultural factors on one side and natural factors on the other. These volumes contain the main contributions that have been made within each of these streams of thought. The selections illustrate to the reader the complexity of the various positions within these streams, and the strengths and limitations of each perspective. A new introduction places these articles in their historical and intellectual context and the volumes are completed with an extensive index and chronological table of contents.
