WOOD BURNING STOVE - Hearth ...

This stipulates that the minimum flue height must be 4.6m above the floor on which the wood heater is located. Therefore, unless the wood heater itself is over a 1000mm high, 3.6m of flue will make the

Access Free Wood Heater

Installation of the wood heater non-compliant. The standard also states that there must be a three meter clearance all the way around the cowl (end of the flue pipe).

Making sure your wood heater is installed correctly

Access Free Wood Heater Flue Installation

Install the stove in the center of your home with the chimney running straight up through the warm part of your house. Limit the number of bends in the chimney and make sure to use insulated high temperature pipe.

Access Free Wood Heater

Match the flue size to the flue collar on the stove. A tall chimney is a happy chimney.

Installing A Wood Stove Chimney - What's The Best Way?

The fireplace or wood heater should function in such a way that ensures

Access Free Wood Heater

Flue Installation
Guide

minimum smoke emissions. The fireplace or wood heater should have a surrounding hearth made of non-combustible materials. The flue, which should be at least 4.6 meters in height from floor level, should be away from any windows or doors.

Install chimney according to chimney manufacturers

Access Free Wood Heater

Installation Guide

The performance of your wood fire is governed to a very large part by the chimney system.

Too short a chimney can cause difficult start-up, dirty glass, back smoking when door is open, and even reduced heat output.
